TECHNICAL SKILLS

Programming Languages	: Python, JavaScript, Typescript
Frontend	: NextJS, ReactJS
Web Technologies / Frameworks	: FastApi, Django, Flask, Node.js, Express.js, Prisma
AI/LLM	: Google ADK, AWS Strands, VertexAI, CCAI, LangGraph, LangChain
Databases & Infra	: MongoDB, PostgreSQL, Elasticsearch, Vector DBs, AWS, GCP, Azure
Tools & Libraries	: Docker, Kubernetes

EXPERIENCE

Sr. Member Technical
Nov 2025 – Current

ADP *Hybrid*

- **Engineered a distributed Python PDF generation pipeline** replacing legacy batch workflows with parallel worker queues and horizontal scaling, improving document generation and signing throughput by **40%.**
- **Contributed to the Simplified MCP architecture**, providing a shared MCP endpoint with an **Auth → Discover → Execute three tool model** and progressive schema disclosure, enabling reuse of existing REST APIs while **reducing upfront agent context by up to 95% (~60K to ~900 tokens)** and improving token efficiency and agent performance.
- **Led development of ADP Assist**, an AWS Strands-based AI assistant serving **2K+ users**, enabling natural-language support across **1K+ APIs** using hybrid semantic/keyword retrieval with Elasticsearch and PostgreSQL, with automated escalation for unresolved issues.
- **Owned the architecture and development of an MCP Certification Engine**, automating API certification and test-collection generation to accelerate validation and standardize certification workflows.
- **Developed AI Studio** to streamline MCP server and chatbot creation, registration, certification, and deployment using a standardized **Spoke-based architecture** for scalable governance and billing.
- **Led modernization of legacy Java services**, migrating workloads to **AWS EKS** and replacing RabbitMQ-based processing with **Amazon SQS asynchronous workflows** to improve scalability and operational efficiency.

Sr. Software Engineer
May 2025 – Oct 2025

Google *(Contract)* *Hybrid*

- Designed and implemented **Conversational AI and NLP** capabilities for inquiry platform chatbot including Gen AI fallback mechanisms on **Google CCAI(Dialogflow)**. Leveraged **data stores to use user-manuals for RAG based system**, improving response quality for unmatched intents and reducing fallback failure rates.
- Developing versatile API enabling **CRUD operations** on Excel sheets for sales target data retrieval from in-house APIs enabling fast delivery and data updating using **Google Cloud Run**.
- **Resolved critical webhook data point issues** that prevented data processing ensuring seamless communication between the chatbot and backend systems. Integrated bot onto website UI.
- Optimized pricing recompilation component performance by **setting rule based pricing and using TTL**.

Freelance Contractor
Feb 2025 - April 2025

- Developed a Standalone Streamlit app for running energy simulation platform integrating DXF geometry processing with EnergyPlus, automating building-model generation, zoning, floor/plenum configuration, WWR definition, and simulation execution with result management.
- Engineered an automated multi-model simulation pipeline to execute multiple EnergyPlus IDF models against weather data, validate simulation health through error-log analysis, and surface success/failure diagnostics.
- Implemented simulation lifecycle and results management, including project-based storage, simulation history, output file discovery, individual file downloads, and consolidated ZIP exports.

Software Engineer
Feb 2022 – Feb 2025

EdgeVerve *Hybrid*

- Developed Scalable RESTful API for Finacle, a global financial platform utilized by over **150 banks in more than 100 countries**, that serves a user base of over **1.7 billion account holders.**
- **Migrated the database from MySQL to PostgreSQL. Conducted load testing on APIs** to ensure efficient job processing under high load after integrating Kafka queuing.
- Enhanced internal data hydration tool by adding support for JSON and CSV data types to improve usability in

current code.

- Optimized JSON file parsing in the Finacle core component by adopting a more efficient approach utilizing parallel processing of data along with Json Parser to parse the file. This enhancement led to a **34% reduction in the overall runtime of the component during daily performance runs**.
- Debugged and fixed issues with Kubernetes (GKE) that lead to Pods not getting data under load added additional quality checks in Jenkins pipeline and **improved the test coverage from 45% to 80%** for Finacle core component.
- Implemented c**entralized JSON file access for core components,** thereby reducing method calls along with removing redundant code. These efforts led to **20% improvement in performance runs**.
- Spearheaded WhatsApp Banking Chatbot Project Organized and re-grouped existing flow on basis of categories for ease of access **fixed performance bottlenecks while** parsing pdf under high load, **added rate limiting** to prevent API abuse. Migrate FMT Ui from low code to react worked on optimizing record reads.
- Integrated DialogFlow with WhatsApp banking chatbot for LLM Integration with different flow for acc options and support along with TTS support using smallest.ai.

EDUCATION

Rajasthan Technical University
B.Tech (Computer Science)
